

Traction Charger New Product Launch

TRACTION
POWER BEHIND THE BATTERY

For immediate release

The **BSU (Battery Support Unit)** has been designed to support the battery during periods of 'ignition on – engine off' work in the workshop this includes ABS brake bleeding/Brake fluid Changes and General Diagnostics.

The loss of battery charge during diagnostic, module software updates or brake bleeding can waste a great deal of time as well as potentially damage delicate electronic components. This could also lead to a situation where the procedure is complete, but the battery does not have sufficient charge to start the vehicle.

The BSU can also be used in the showroom to prevent the battery losing charge while accessories are being demonstrated.

The BSU is designed to compensate for the loss of power by matching the power consumed. It has been designed to be simple to operate; the three lights on the display show the status of the device 1/switched on 2/ correct polarity 3/ power delivery.

The BSU features an injection moulded ABS case, that gives it light weight and its rounded corners help prevent damage to paintwork. The BSU can either be wall, lift, or tool cabinet mounted

The BSU is also available with an under bonnet mount, detachable output leads for ease of replacement. The BSU carries a 12 month warranty.
