

TRACTION
POWER BEHIND THE BATTERY

For immediate release

New product launch
9th April 2008

Traction Charger launch their latest version of the MPL battery charger designed for the C.V. market. The charger is a 12v /24v Duo charger that charges each of the two 12v batteries separately without the need to dismantle or disconnect the batteries. This ensures that each battery gets the charge it needs maximising the reliability and life of the battery pack, saving the operator both time and money. The charger is available in 240v or 110v input models. See Traction Charger on stand 9-330 in the Workshop section of the show.

The MPL range of battery chargers are approved and used by some of the worlds leading vehicle and battery manufacturers and feature our Patented Sulphation Recovery System.
